

	Finding	Evidence	Limitation
Training-Associated Exit Collapse	R^2 drops at exit layers after VLA fine-tuning	6/6 VLM→VLA conditions show $\Delta > 0.10$; 0/4 VLA→VLA; 0/10 reference conditions	Correlational, not causal
Action-Relevant Sensitivity	Counterfactual perturbation reveals action-linked representations	Cohen's $d \geq 0.45$ across 8 trained conditions; empty ranks first in 6/8	d vs cosine metric incomparability
Inherited Instruction-Attention Prior	L1 attention patterns inherited from pre-trained VLMs	Reference VLMs already show task-structured attention	Not causally tested
